for best exhibit of 50 Dahlia Blooms, no two alike.

GREETINGS, FRIENDS!

It would indeed be a great pleasure to meet you all at this time and wish you a happy and prosperous New Year. What occupation could give more pleasure and be more fascinating than growing a few of the many beautiful Dahlias that are now being offered? Each succeeding year seems to bring forth larger and more wonderful creations. Although California is yielding some very fine novelties, it is my opinion that good old New England is more than holding her own in the production of the world's finest Dahlies. I wish to take this opportunity to again thank you all for the very liberal patronage I received the past year and to assure you I will do my best to merit a continuance of your patronage.

EDGAR W. DARLING.

Terms—Prices quoted are (unless otherwise stated) for field grown tubers, post paid. Cash must accompany all orders, or in advance of shipment. I start shipping in April, and orders are filled in rotation as received.

As the demand for some of the finer sorts often exceeds the supply, it will be well to order early, and so avoid disappointment. I guarantee the tubers I send out true to name, and to arrive in good growing condition, but cannot guarantee them to live and thrive. They should be returned upon delivery if not satisfactory. Plants will be shipped after May 15th.

Attention: Orders taken in the fall not fully paid for will be sent C. O. D. unless previous arrangements have been made.

HOW TO GROW EXHIBITION BLOOMS

There is no mystery about growing exhibition Dahlias. If large blooms are wanted for the Fall shows July 1st is time to plant. Prepare the soil thoroughly by digging 12 to 18 inches deep. After this dig holes five inches deep and from three to four feet apart. Always lay the tuber flat on its side, the size of which makes no difference as long as it has one strong eye or sprout. Cover about three inches, leaving the rest to be filled in after the plant comes up. If more than one

sprout comes up remove all but the strongest. When plant is large enough pinch out the top just above the second or third set of leaves, which causes the plant to branch. Only allow four or six branches to grow. When buds appear remove all but the terminal bud. If this is imperfect, choose another and cut off all side shoots full length of stem. Keep the ground well cultivated at all times. About the time the buds appear scatter sheep manure over the ground and rake lightly. After this a good watering is beneficial. Tie each plant to a strong stake that it may have a good support.

If Dahlias are wanted for garden decoration and cut flowers, May 15 to June 1 is the best time to plant. Disbud carefully.

HARD WOODED PLANTS

If tubers are planted early in rich heavy soil and the season is hot and dry, the plants are liable to become hard-wooded, few blooms appear and imperfect flowers. If this is your case, be not dismayed. Cut the plant back to the ground. New growth will soon burst into beauty with perfect flowers.

PLANTS

Experience has taught me that plants produced from cuttings do equally as well as tubers if planted not later than June 15th and will produce good clumps of tubers if grown properly, with larger and more perfect flowers.
